

Introducing

# ONLINE VITALITY™ alias MANAGER component™

Give sub-admins the power to manage Aliases!

## manage ALIASES

Online Vitality's Alias Manager Component gives sub-administrators the ability to create and manage aliases through a web interface. With the Alias Manager, sub-administrators are granted a full range of tools to create, edit, and manage aliases through the Stellent Content Server™.

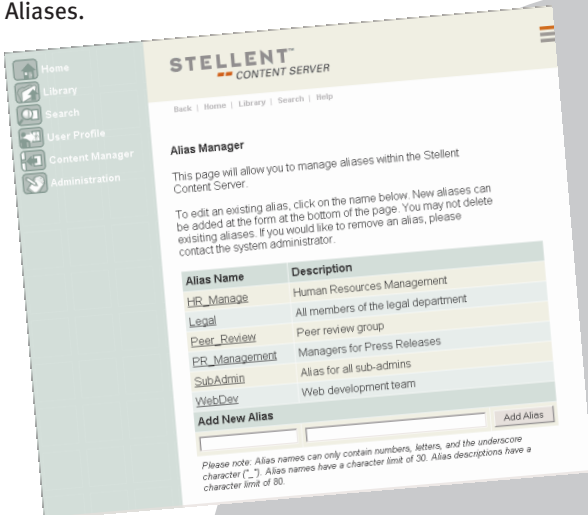

With the Alias Manager, any user who has the ability to add users will be given a new button on the Administration screen. This new button will launch the Alias Manager, which allows users to add and edit Aliases, as well as manage the individual users within those Aliases.

## easy INSTALLATION

Alias Manager installs quickly and easily to your Stellent Content Server. To install, simply upload the component, enable it, restart the server, and all of the functionality of the Alias Manager is ready for use!

## further CUSTOMIZATIONS available

The Alias Manager can be further customized to accommodate additional features and functions that may be needed by your organization.
