

Introducing

ONLINE VITALITY™

web LIBRARY layouts™

Giving your Web Libraries a whole new look!

custom LIBRARY layouts

Online Vitality's Web Library Layouts allows users to transform their Web Libraries into a variety of new, easy to read formats. Now information can be displayed in tables, lists, and free-form HTML displays. Users do not need to know any HTML to use these new formats, and everything is accessible directly from the standard Stellent Web Layout Editor.

Designs within the Web Library Layouts are easy to change and customize. All colors and fonts are managed through a single style sheet, which can easily be modified to match your company's look and feel.

easy INSTALLATION

Web Library Layouts installs quickly and easily to your Stellent Content Server. To install, simply upload the component, enable it, restart the server, and all of the functionality of the Workflow Reporter is ready for use!

further CUSTOMIZATIONS available

The Web Library Layouts can be further customized to accommodate additional features and functions that may be needed by your organization.
